

Redefining Freight

[SEE THE PLATFORM](#)[BOOK A DEMO](#)

[FREIGHT]

RELAI IS THE FIRST UNIFIED PLATFORM FOR PORT AND FREIGHT LOGISTICS — CONNECTING VESSEL, TERMINAL, YARD, AND TRUCK INTO A SINGLE, REAL-TIME SYSTEM. BUILT FOR THE MODERN SUPPLY CHAIN, RELAI TURNS THE HANDOFFS THAT SLOW FREIGHT DOWN INTO ONE COORDINATED, INTELLIGENT FLOW.

[MEDIA]

Freight has gone global. The software didn't keep up. Relai replaces the disconnected, decades-old systems that move the world's cargo with a single platform built for speed, visibility, and coordination.

Relai began with a simple observation: the supply chain doesn't break in transit — it breaks at the handoffs. Between ship and port. Port and yard. Yard and truck. Each seam runs on its own aging system, and freight loses time, money, and fuel in the gaps. Relai closes them — coordinating every handoff in one platform built for how freight actually moves.

VESSEL INTELLIGENCE

Live tracking and predictive ETAs across every vessel in your network — so the dock is ready before the ship is.

VESSEL INTELLIGENCE

DIAGRAM

"We'd spent years stitching together systems that were never meant to talk to each other. Relai is the first platform that treats the whole journey as one operation. We can see a vessel three days out and have the yard and drivers sequenced before it berths. The idle time we've cut goes straight to the bottom line — and to our emissions targets."

«MARCUS VANCE — VP OF TERMINAL OPERATIONS, PACIFIC GATEWAY LINES»

Relai is a venture-backed logistics-tech company, supported by leading climate-tech and supply-chain investors. Founded by terminal operators and engineers who watched global trade run on software older than the internet, Relai was built to be the coordination layer the modern supply chain never had.

IMAGE — MISSION

About us

Trillions of dollars in freight still move on systems built before the cloud. See why we're rebuilding the layer that coordinates global trade.

Mission

Moving the world's freight with less waste, less idle, and less carbon.

The future of freight

Relai is a cloud-native coordination platform built for terminals, carriers, and freight operators. With a unified, real-time interface and tools that adapt to any network, Relai gives the supply chain the visibility and control to move faster — and cleaner.
