

The Relai Mission

BUILT AT THE PORT OF LONG BEACH

[MISSION]

THE COORDINATION LAYER FOR GLOBAL FREIGHT — BUILT TO MOVE THE WORLD'S CARGO
WITH LESS IDLE, LESS WASTE, AND LESS CARBON.

[MEDIA]

THE MISSION IN NUMBERS

920+ hrs

IDLE PER VESSEL, YEARLY

The average container ship loses the equivalent of nearly 40 days a year waiting: at anchor, at berth, in the yard. Idle time is the supply chain's most expensive habit.

68%

STILL ON LEGACY SYSTEMS

More than two-thirds of global freight is coordinated on software written before the cloud. Relai is the layer that finally connects the gaps between them.

1.2M+

CONTAINER MOVES A YEAR

Relai coordinates over a million container handoffs annually across its launch network — every one tracked from ship to truck.

11%

EMISSIONS CUT AT PILOT TERMINALS

By cutting idle and waiting time, Relai's pilot terminals have measured a double-digit drop in fuel burn and emissions per move.

Shape the future of global freight

The supply chain is being rebuilt for a lower-carbon, real-time world — and it will take operators, carriers, and ports moving together. If your organization is ready to coordinate freight differently, we'd like to talk.

The future of freight

Relai is a cloud-native coordination platform built for terminals, carriers, and freight operators. With a unified, real-time interface and tools that adapt to any network, Relai gives the supply chain the visibility and control to move faster — and cleaner.

GET IN TOUCH
