PLATFORM

**Relai was built from the ground up as a cloud-native coordination platform for global logistics. It unifies vessel tracking, terminal operations, drayage, and emissions into one real-time system — giving operators the visibility, speed, and control the modern supply chain demands.**

It starts at sea. Relai ingests live AIS position, weather, and port-congestion data for every vessel inbound to your network, then models arrival windows continuously as conditions change. Instead of a static ETA that's wrong by the time it matters, your team works from a prediction that updates by the hour — and the rest of the operation plans against it.

---

02    **Terminal Orchestration**

---

03    **Drayage & Handoff**

---

04    **Emissions & Idle**

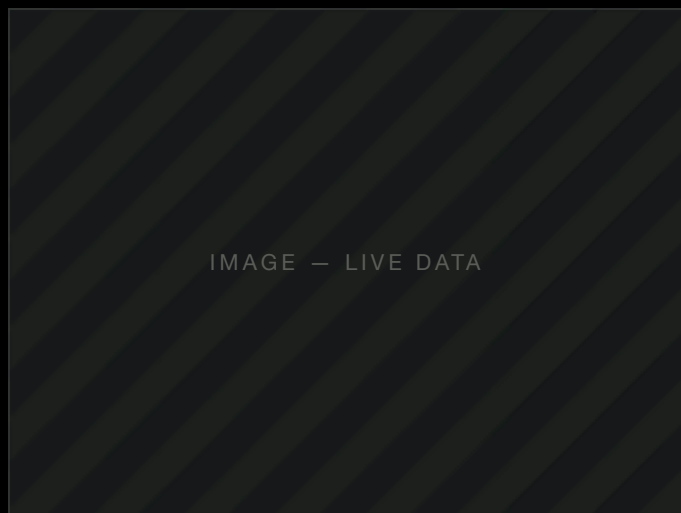

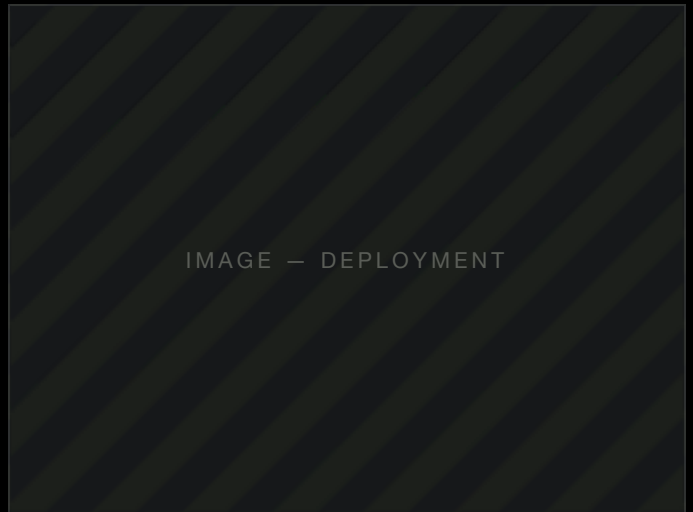

---

## Designed to deploy fast

Relai handles the complexity — so your team doesn't have to. From terminal integrations to carrier APIs, every connection is configurable out of the box. No custom builds, no patchwork. One flexible platform that fits your network from day one.

«One of the largest terminal operators on the West Coast went live on Relai in under four months — across a single port and one carrier network.»

Your team stays lean. Your data stays clean.  
Your freight keeps moving.

## Real-time by design

Relai isn't just connected — it's live. The system of record is the data in your warehouse: no sync jobs, no lag, no ambiguity. Just real-time visibility ready for planning, reporting, and action. It fits into your existing stack, so you can finally stop working around your core systems.

## Frequently asked questions

---

**What is Relai's current scale, and what's available?** —

Relai is live in production, coordinating freight across ›14 terminals and 200,000+ container moves per month‹ with our launch partners. We're on track to support ›1 million monthly moves by the end of 2026‹. Today, Relai powers live vessel tracking, terminal orchestration, and drayage coordination, with emissions analytics rolling out across the platform.

# The future of freight

Relai is a cloud-native coordination platform built for terminals, carriers, and freight operators. With a unified, real-time interface and tools that adapt to any network, Relai gives the supply chain the visibility and control to move faster — and cleaner.
